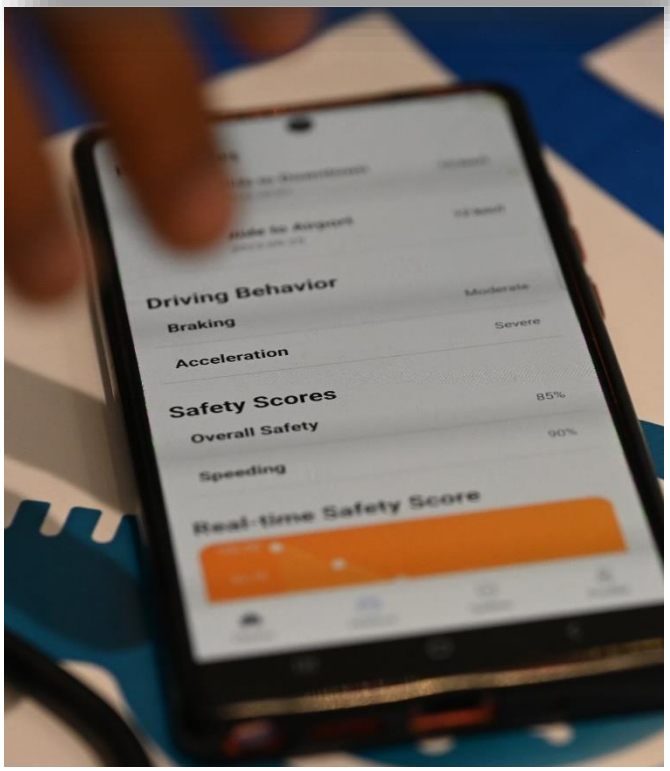
EXECUTIVE SUMMARY

Enduraverse'25 marks a significant milestone for Endurance Technologies as we launch our first-ever hackathon—an initiative designed to foster innovation, collaboration, and problem-solving in the mobility space. This event brings together some of the brightest engineering minds to tackle real-world challenges, develop groundbreaking solutions, and contribute to the future of automotive technology.

With a strong emphasis on Learning & Innovation, Enduraverse'25 is more than just a competition; it is a strategic initiative aimed at strengthening industry connections, identifying future talent, and driving technological advancements. As we embark on this journey, we look forward to transforming ideas into reality, setting new benchmarks, and shaping the future of mobility.

This report captures the essence of Enduraverse'25, highlighting its objectives, outcomes, and the impact it has created.



HIGHLIGHTS

Innovation distinguishes between a leader and a follower
Steve Jobs

GOALS AND OBJECTIVES

At Endurance Technologies, we believe that the future is built by those who dare to dream, innovate, and challenge the norm. Enduraverse'25 is more than just a hackathon—it is a movement to ignite passion, push boundaries, and shape the next generation of engineering excellence.

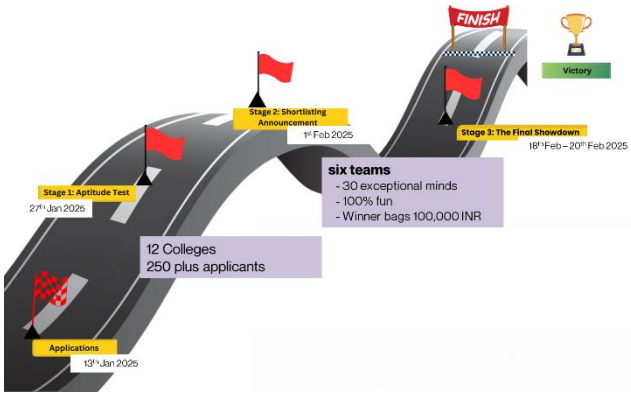
- **Strengthen Brand Presence** – Engage with top engineering talent across India, creating awareness about Endurance Technologies' vision, products, and impact.
- **Cultivate a Culture of Innovation** – Provide a platform for young engineers to develop real-world solutions, reinforcing ETL's commitment to learning and technological advancement.
- **Bridge Industry & Academia** – Foster meaningful collaborations between students and ETL's R&D experts, encouraging knowledge exchange and breakthrough thinking.
- **Discover Future Leaders** – Identify and nurture exceptional talent, building a strong pipeline of innovators who will drive Endurance Technologies' future growth.

With ***Enduraverse'25***, we are laying the foundation for a future where ideas turn into reality and innovation knows no limits.

THE JOURNEY

The Enduraverse'25 Hackathon followed a clear and competitive process to bring together the brightest minds for the final stage.

- **Application Phase** – We invited students from twelve top engineering colleges across India, receiving 250 applications.
- **Aptitude Screening** – Shortlisted applicants underwent an online Aptitude Test to assess their problem-solving and technical skills.
- **Final Selection** – The top thirty students from the test were invited to participate in Enduraverse'25 and were invited to our L6-Driveline plant.
- **Team Formation** – The selected students were clustered into six teams, each consisting of five participants, to compete in the 72-hour Hackathon.
- **The Grand Challenge** – Teams worked on a given problem statement, developing innovative prototypes, with the winning team receiving a cash prize of ₹1,00,000.



This rigorous process ensured that Enduraverse'25 brought together the best talent, pushing the boundaries of innovation and engineering excellence.

THE HACK

In today's connected world, data acquisition and real-time monitoring play a critical role in optimizing vehicle performance, enhancing safety, and improving overall efficiency. The challenge presented in ***Enduraverse'25*** is to **design and develop a low-cost telematics dongle** that can efficiently collect and transmit vehicle data while ensuring affordability, reliability, and ease of integration.

Scope of Work:

Participants are required to develop a **working prototype** that includes:

- **Hardware Development** – Designing the circuitry for the dongle, ensuring compactness and cost-effectiveness.
- **Software Development** – Implementing firmware and software logic for data acquisition and transmission.
- **Mobile App Development** – Creating an intuitive mobile interface for data visualization.
- **Connectivity & Cloud Integration** – Enabling real-time data storage and access via cloud-based solutions.

Evaluation Criteria:

The projects will be judged based on the following key parameters:

- **Cost** – Affordability and feasibility of mass production.
- **Technology** – Use of innovative and scalable technologies.
- **Design** – Compactness, efficiency, and integration ease.
- **Reliability** – Consistency and accuracy of data transmission.
- **Repeatability** – Ability to maintain performance under varied conditions.

This Hackathon is not just about innovation but about **shaping the future of connected mobility** with cutting-edge yet accessible technology solutions.

Key Takeaways:

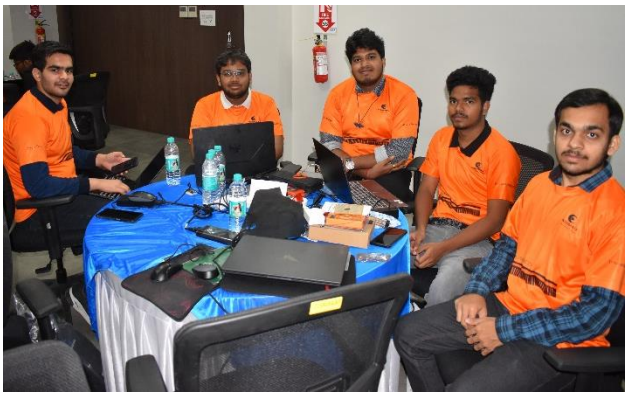
Beyond the competition, participants will gain:

- **Hands-on skill development** in IoT, telematics, and embedded systems.
- **Immersive learning** by working on real-world automotive challenges.
- **Exposure to industry leaders** through mentorship and guidance.
- **Opportunities for future collaboration** and potential career prospects.

THE PLAYERS

Padavas (SRM IST, Chennai)

ByteTribe (SRM IST, Chennai)

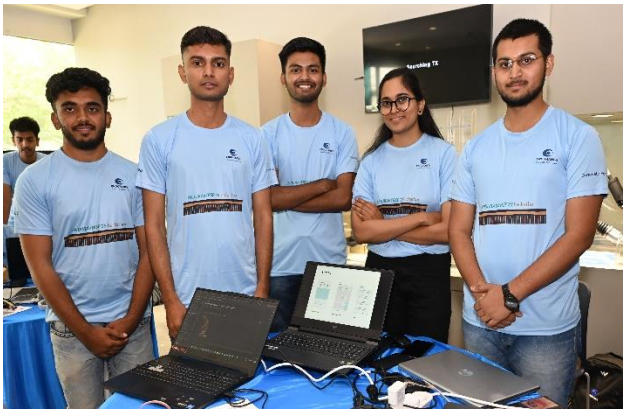


Maroon 5.0 (MIT, Manipal)

The Axionators (MIT, Manipal)

Synapse (YCCE, Nagpur)

Perseverance (MIT and MGM, Aurangabad)



THE RESULTS

Team Name	Product Demonstrator	Silver Lining	Setback	Jury Votes	Popular Votes	Rank
Synapse (YCCE, Nagpur)		- Technology Stack - Power Efficient System - Low-cost dongle - Innovation (Blockchain) - Requirements Mapping - Machine Learning Model		75	13	1st
Maroon 5.0 (MIT, Manipal)	cost of the dongle: 500 INR	- Technology Stack - Power Efficient System - Low-cost dongle - Market Analysis - Cost Breakdown - Fail Safe Analysis		75	5	2nd
Pandavas (SRM IST, Chennai)		- Product Pitch - Technology Stack - Sensor Fusion - Innovation Spin off (Smart SoS)	- Dilution of Core Problem Statement - Presentation setback - Code not committed in GitHub repository	71	3	3rd

ByteTribe (SRM IST, Chennai)		- Technology Stack - Innovation (Digital Twin) - Team Management - Profit from Open Source	- Dilution of Core Problem Statement - Last minute slide deck	69	4	4th
The Axionators (MIT, Manipal)		- Architecture - Technology stack with flowchart - Implementation of RideModes	- Dilution of Core Problem Statement - Last minute slides	68	-	5th
Perseverance (MIT and MGM, Aurangabad)		- Presentation - Learning process	- Fell Short of Product Completion	47	4	6th

🎉 Congratulations to Team Synapse for their incredible achievement! 🏆

A proud moment for the Department of Computer Technology, YCCE as our talented students emerged as the winners of "Enduaverse'25", a prestigious hackathon organized by Endurance, Aurangabad, Maharashtra (18th-20th Feb 2025).

Kudos to Priyanshu Behere (3rd Year CT), Pratik Rai (2nd Year CSE-IoT), Raunak Kalamkhede (3rd Year IT), Swanish Mahajan (3rd Year CSE-AIML), and Manasi Kohapare (3rd Year Electronics Engineering) for their outstanding performance, securing a cash prize of ₹1 Lakh! 🥇

A special thanks to Mr. Nikhil Mangrulkar for mentoring the team and Mr. Neeraj Wakhre for their support.

This victory is another feather in the cap of our department, showcasing the power of innovation and teamwork! 🚀 👏 #HackathonWinners #TeamSynapse #Innovation #ProudMoment

🚀 From Chennai to Aurangabad for Enduraverse'25! 🚀

For the first time, I stepped out of my state to participate in a hackathon in another state, and what an incredible journey it has been!

Thrilled to share my experience at Endurance Technologies Ltd., Aurangabad, the first-ever business pitching and IoT-based technology development hackathon—a unique, 3-day innovation-driven event in Aurangabad, Maharashtra. From start to finish, it was an immersive experience, fully sponsored by the company, allowing us to focus entirely on creativity and problem-solving.

Our team built a cutting-edge data analytics platform, integrating React Native and IoT sensor fusion with ESP32 and MPU6050. Our solution featured:

✅ 3D Digital Twin technology for real-time vehicle monitoring with live updates and visualizations.
✅ Real-time data analytics with a custom-built, user-friendly UI for seamless insights.
✅ A fine-tuned LLM pipeline with multilingual support, enhanced by ML model integration.
✅ Advanced cloud computing and real-time storage integration for optimal performance.

Big shoutout to my incredible teammates:
Kushagra Purohit
Godavari Venkata Sai Tharun
Sathya Narayanan

A huge thank you to Harsha Vardhan Rahul Chandrashekar for putting together such a fantastic event and the generous goodies and exciting internship prospects! This was truly an incredible experience, and I can't wait for what's next! 🚀

💡 **6 Teams. 30 Bright Minds. 72 Hours. 100,000+ Lines of Code. One Bold Experiment.** 🚀

When passion meets purpose, extraordinary things happen.

For 72 electrifying hours, we witnessed a confluence of passion and agility—where ideas turned into prototypes, lines of code shaped the future, and innovation knew no limits. 100,000+ lines of code weren't just written but woven into the fabric of next-gen automotive electronics.
This was more than a hackathon—it was a movement. A bold experiment proves that the impossible becomes reality when brilliant minds come together.

🔥 Speed. Precision. Disruption.
🔥 Breakthroughs that will redefine the future.
🔥 A testament to what relentless innovation looks like.

A massive shoutout to the incredible participants, mentors, and organizers who made this possible! And this is just the beginning... Stay tuned for what's next! 🚀

🚀 An Unforgettable Hackathon Experience at Endurance Technologies!

I'm thrilled to share my experience attending Endurance Technologies' very first business pitching and IOT based technology development hackathon – a one-of-a-kind hackathon, 3-day event held in Aurangabad, Maharashtra. The company fully sponsored our travel and stay, giving us the opportunity to dive headfirst into innovation and creativity.

Our team developed a cutting-edge data analytics platform built on React Native and IoT sensor fusion using ESP32 and MPU6050 sensors. The platform showcased:

1) 3D Digital Twin technology for real-time monitoring of vehicle with real-time updates and visualisations.
2) Real-time data analytics integrated into the application with custom built user friendly UI.
3) A fine-tuned LLM pipeline with multilingual support, boosted by ML models integration.
4) Realtime Advanced Cloud-Computing and storage platform integration.

Being praised by the respective judges for Our out-of-the-box thinking and dedication paid off—we secured first position in our college and were the 2nd Runners Up in the hackathon!

Our team consisting of experts from their respective domains respectively:
Vivek M G
Godavari Venkata Sai Tharun
Sathya Narayanan

A huge thank you to Endurance Technologies for the opportunity, amazing goodies, and internship prospects. It was an incredible experience, and I'm excited for what's next!

Enduraverse'25 thanks the below organizing committee for their efforts in making this hackathon a smashing hit!

Name	Contribution
Preety Raj	Incubation and Ideation, Leadership Pitch, Sponsor
Rahul Chandrashekar	Incubation and Ideation, Problem Statement Elicitation, Concept to Launch, Hackathon Experience, Sponsor
Dinesh Kalani	Concept to Launch, Logistics Management
Subrato Mitra	Concept to Launch, University Connect
Harsha Vardhan	University Connect, Student Liaison
Shreya Kumari	University Connect and Support
Naveen Rao	Logistics, Transportation, Accommodation, Vendor Management
Shradha Josalkar	Logistics, Transportation, Accommodation, Vendor Management
Sachin Pathak	Logistics, Transportation, Accommodation, Vendor Management
Saloni Mandlik	Co-ordination and Execution
Shivam Panchal	Co-ordination and Execution
Bandla Sai Teja	Support and Execution
Kamma Raju	Support and Execution
